

Executive Summary

Based on the data findings, University of Virginia has a low percentage share for foreign given amounts. However, the low percentage share does not reflect every single university in the United States, as there are various universities that prove to have a higher foreign share received from other countries. Through this, University of Virginia has potential to increase their percentage share from foreign given amounts if they target more countries that give a lot of foreign given amounts but have little to no contribution to University of Virginia.

Summary

For overall giving, there are more contract gift types than monetary gifts and both more than other gift types. Qatar, England, and China give the most amount of money. However while the latter two are the ones who initiate more gifts overall, Qatar gives less gifts in comparison despite the money it gives. On the other hand, Qatar (alongside Bermuda and Ecuador) give larger gifts on average. For universities, Carnegie Mellon University receives more total money, University of California initiates most gifts, and Brigham Young University receives the highest average amount of money. Qatar's donation to Cornell University is the highest foreign amount given to an American university. Qatar is the largest giftor overall.

For UVA giving, they receive a total of \$22189238 that averages to \$226420.79, have gained 98 foreign gifts, and a median amount of \$80535.50. England has given the most gifts to UVA but Bangladesh gives the most foreign gift amount and Switzerland has the highest foreign gift mean. Compared to other Virginia universities, UVA has a lower foreign gift total amount compared to VCU and GMU but higher than Virginia Polytechnic Institute & State University and William & Mary. However, it has a lower average foreign gift given compared to the other

Virginia universities (except for William & Mary). The foreign gifts given are more in VCU than UVA, but lower for the others.

Strategy

For how UVA could find potential sources of money, they could try to target and appeal to countries that have a history of giving more money to American universities. With this idea, they could capitalize on the interest in donating to higher education by those countries. Countries that would be greatly beneficial to target are Qatar, China, and Saudi Arabia where they have donated a lot of foreign gifts to American universities, but little to none for the University of Virginia. The data shows that there is a lot of interest in donating to higher education in those countries, but UVA is not currently receiving much support from them. Targeting those countries for support could rectify the issue.

Summary for Prospects

UVA's foreign giving has potential to expand. While the bigger countries (in terms of foreign gifts) haven't been as active in foreign gift donating to UVA, their interest in American universities shows there is hope to expand. They just need to target bigger countries that have a large interest in donating to American universities and also maintain relations with countries that have donated a good amount to them, giving an ideal situation for them to expand with a more diverse selection of countries than before.
